

Aerialink Conversations SP

Empowering Service Providers with account setup to deliver a powerful and branded texting solution.

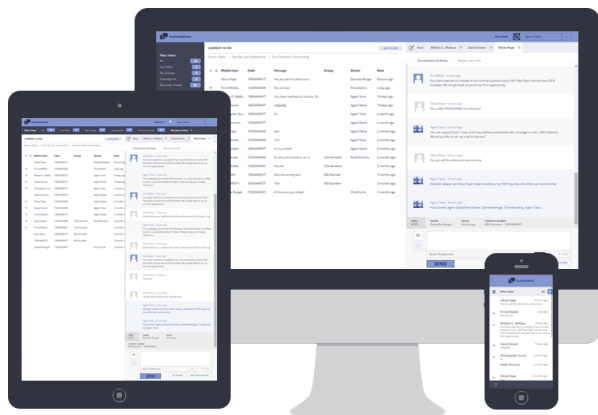

Put your brand on our award-winning messaging solution

Conversations SP (Service Provider edition) is a powerful management solution for administering branded texting applications to your customers or entities under your business umbrella. It's designed for service providers and enterprises looking to expand or enhance their business texting capabilities and offering.

If you are a service provider and looking to increase your revenue, Conversations SP also provides a great opportunity for business growth through this new business texting revenue stream. Conversations SP is designed for companies who would like to offer solutions under their own brand or umbrella, and who would like to partner with Aerialink in the background providing messaging expertise.

A complete solution

It's an end-to-end solution encompassing a seamless interface between the application and the messaging gateway. The gateway processes messages through Aerialink's trusted and reliable **Cloud Communications Platform**. In addition, our platform supports text enablement of your customers' business landline, toll-free, and standard U.S. and Canada numbers.

A model that can scale as your business grows

You can add unlimited, additional entities and users. There are no complicated credits or pre-bundled messages that can go to waste if you haven't used them up by the end of the month. It's a simple pay-per-use for messaging and numbers, along with monthly plans fees, optional custom domain fees, and a small per-entity fee.

Multi-Entity Hierarchy Structure

Multi-entity management

The account structure is set up as an ownership hierarchy, where the top-level (Super Service Provider - owner) can have multi-entities under their account, consisting of sub level resellers (Service Providers) and direct users of Conversations (Companies).

Offer a solution under your own brand

The application can be easily branded with a custom logo, custom website domain, and user interface color theme. Each subaccount can inherit your SP theme, or you can change the theme based on your customer's needs.

Configurable account setup, no I.T. skill required

Every business is different, and so their communications workflows and needs may be unique to their particular operation. Conversations SP gives you flexibility to tailor the application through You can use the Admin user interface, with no I.T. skills needed. If you are a RespOrg and use the 8MS Cloud toll free provisioning platform, you can setup Con-

versations accounts through that UI.

Offer a differentiating solution to your customers

In addition to the intuitive texting functionality and managing all conversations from one place, collaboration and automation features set the application apart from the competition.

Conversations Account Provisioning API

Shrink the time needed to setup accounts by automating the provisioning of multi-entities. This API allows for programmatic access to the Conversations configuration data. Large organizations with many entities or properties can automate account setup.

Conversations SP plans include

UI branding and custom domain options, multi-entity management, Conversations account provisioning API, training and access to the Aerialink Cloud Communications Platform management portal.
